## Anticoagulation Clinic

### The concept:

Integrated health systems seamlessly provide care across practice settings through appropriate use of individual health professionals and teams.

As integrated systems expand to offer more intensive ambulatory care services and cover broader geographic areas, an Outpatient Anticoagulation Clinic is likely to become more prominent, improving patients' access to, and continuity of care, implementing disease management and focusing on quality-related outcomes, which help contribute to lowering the total cost of patient care.

### Objectives:

The goal of this service is to offer a standardized process for the individualized assessment, adjustment, monitoring and education of patients receiving warfarin and other anticoagulants on an outpatient basis by a multidisciplinary team in which the clinical pharmacist plays an integral role.

### Mission:

To deliver a standardized anticoagulation care that is safe and effective.

### Vision:

To become the lead anticoagulation service in the region that integrates the best practice standards and research to improve patient's outcomes.

### Patient population we serve:

Adult patients on warfarin or other anticoagulants for:

- Treatment / secondary prevention of venous thromboembolic disorders
- Treatment / prevention of other embolic non cardiac conditions (pulmonary hypertension, embolic stroke, arterial thrombosis etc.)

### How to refer:

- From orders, select medicine 'anticoagulation follow up'
- Select Hamad General Hospital from the drop list
- From the ad hoc, please complete the warfarin therapy form

### Multi-Disciplinary Team
