## Maternal and Child Healthcare Online Resources

At HMC, our maternity hospitals are dedicated to caring for women and their babies. Our services range from reproductive health, to prenatal care, to obstetrics and gynecology and to newborn care. We follow international best practices and are committed to providing high-quality healthcare for all of our patients, women and their children.

This is an online resource for our patients, and potential patients to provide you with detailed information about pregnancy, breastfeeding, newborn and young children's health in addition to information about services available across all our maternity hospitals as well as frequently asked questions.

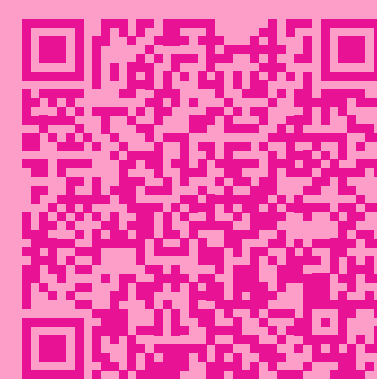

There will also be videos and infographics about our maternal and child health services and links to publications and other relevant information to keep you informed.
